EDUCATION

Boston University

Boston, MA

Bachelor of Arts in Computer Science

Graduated: Spring 2026

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Distributed Systems, Databases.

EXPERIENCE

Software Engineering Intern

February 2026 – June 2026

RESET Standard

Shanghai, China

- Doubled the platform's supported environmental data categories (from 2 to 4) by independently implementing end-to-end water and waste data integration, developing Rails backend ingestion pipelines, PostgreSQL schemas, and client-facing React/Vite/Tailwind dashboards.
- Implemented a key client-requested feature by redesigning project-device mapping workflows, refactoring legacy forms to streamline the onboarding of environmental monitoring devices.
- Engineered asynchronous data pipelines with RabbitMQ, Redis, and Sidekiq to process long-running ingestion jobs in the background, decoupling external API calls from user-facing requests.

Technical Director / Software Engineer

December 2025 – Present

Ezesports

New York, NY

- Designed a PostgreSQL schema on Supabase using Drizzle ORM, supporting 500+ matches across 20+ teams, and built RESTful endpoints for player statistics, standings, and historical data.
- Migrated an esports league platform from Google Sites to Next.js with a Supabase backend, replacing manual content updates with live scoring and automated season management.

IT Consultant

January 2024 – July 2025

Boston University Engineering IT

Boston, MA

- Automated software deployment for 100+ devices using Microsoft Deployment Toolkit and created custom USB deployment solution for Windows 11, reducing deployment time by 40%
- Managed 200+ user accounts and permissions via NAS, conducting access audits and boosting system uptime by 15%

PROJECTS

Self-Hosted Media & Application Server | *Docker, Linux, Cloudflare, Nginx, Automation*

November 2025

- Architected containerized home server infrastructure using Docker Compose, orchestrating 10+ microservices including Sonarr, Radarr, Prowlarr, Jellyfin, Jellyseerr, and qBittorrent for automated media management and streaming with 99%+ uptime
- Implemented secure external access using Cloudflare Tunnels with zero-trust network architecture, eliminating port forwarding vulnerabilities while hosting personal website and services accessible via custom domain
- Configured automated workflow pipelines with inter-container networking and reverse proxy routing, integrating Slskd for automated music library transfers over the Souseek network and establishing centralized monitoring for resource optimization

TECHNICAL SKILLS

Languages: Python, C++17, Java, JavaScript, TypeScript, SQL, Cython, Rust

Frameworks & Libraries: FastAPI, Spring Boot, React, Next.js, Drizzle ORM, FAISS, CuPy

Databases & Infrastructure: PostgreSQL, Docker, Docker Compose, Nginx, Cloudflare Tunnels, RabbitMQ, Redis, Supabase, Git

Platforms & Systems: NAS, Modal, Kalshi, CrowdStrike
