EDUCATION

Boston University

Bachelor of Arts in Computer Science

Boston, MA

September 2022 – May 2026

EXPERIENCE

Software Engineer

September 2024 – December 2024

BU Spark!

Boston, MA

- Developed full-stack food waste platform using Django, JavaScript, and SQLite, connecting 500+ students and reducing campus waste by 10%
- Built RESTful API with sub-100ms query times and deployed via CI/CD pipelines on Heroku
- Implemented Auth0 authentication and Django security middleware, ensuring zero security incidents
- Accelerated release by 1 week using Agile methodology in team of 5, contributing to 7 iterations

IT Consultant

January 2024 – July 2025

Boston University Engineering IT

Boston, MA

- Automated software deployment for 100+ devices using Microsoft Deployment Toolkit and created custom USB deployment solution for Windows 11, reducing deployment time by 40%
- Managed 200+ user accounts and permissions via NAS, conducting access audits and boosting system uptime by 15%
- Enhanced endpoint security with CrowdStrike for 50+ devices, resolving 20+ tickets/week with 100% incident resolution rate

PROJECTS

Audio Transcription Platform | *Java Spring Boot, Python FastAPI, React, PostgreSQL*

September 2025

- Built microservices platform with Spring Boot API, Python FastAPI service, and React frontend, implementing async audio processing with OpenAI Whisper and real-time status polling
- Designed PostgreSQL database with 4 related tables, Flyway migrations, and optimized indexing, supporting multiple audio formats with comprehensive error handling
- Deployed containerized application using Docker Compose with inter-service communication, CORS configuration, and health monitoring endpoints

Scalable Chat Platform | *Go, AWS (ECS, RDS, ElastiCache, ALB), WebSockets, Docker*

[Month] 2026

- Architected cloud-native messaging platform on AWS ECS with auto-scaling policies, PostgreSQL RDS, and Redis ElastiCache, handling [X] concurrent WebSocket connections (load test with Artillery.js)
- Implemented horizontal scaling with Application Load Balancer and sticky sessions, deploying via GitHub Actions CI/CD with blue-green deployment strategy achieving [X]% uptime (CloudWatch metrics)
- Integrated comprehensive observability with CloudWatch dashboards, custom metrics, and structured logging, enabling sub-[X]ms P95 response time monitoring (APM traces and database query analysis)

Fitness Tracking Mobile App | *React Native, TypeScript, Expo*

August 2025

- Built cross-platform app with drag-and-drop workout creation using React Native Reanimated v3 and PanGestureHandler for exercise reordering
- Implemented persistent data storage with AsyncStorage and custom React hooks for state management across workout sessions
- Developed modular component architecture with search/filter functionality and modal-based exercise selection interface

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, Go, SQL (PostgreSQL), HTML/CSS

Frontend Frameworks & Libraries: React, React Native, Expo, Reanimated, PanGestureHandler

Backend Frameworks & Libraries: Spring Boot, FastAPI, Django, Node.js

Cloud & Infrastructure: AWS (ECS, RDS, ElastiCache, ALB, CloudWatch), Docker, Heroku

Databases & Storage: PostgreSQL, SQLite, Redis, AsyncStorage

Tools & DevOps: Git, GitHub Actions, CI/CD, Docker Compose, Observability
