EDUCATION

Boston University

Bachelor of Arts in Computer Science

Boston, MA

Graduated: Spring 2026

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Distributed Systems, Databases.

EXPERIENCE

Technical Director

December 2025 – Present

Ezesports

New York, NY

- Migrated an esports league platform from Google Sites to Next.js with a Supabase backend, replacing manual content updates with live scoring and automated season management.
- Designed a PostgreSQL schema on Supabase using Drizzle ORM, supporting 500+ matches across 20+ teams, and built RESTful endpoints for player statistics, standings, and historical data.
- Cut page load time by 75% (from 3.2s to 0.8s) by implementing edge caching on Cloudflare, route-based code splitting, and asset optimization for the Next.js frontend.

Software Engineering Intern

February 2026 – June 2026

RESET Standard

Shanghai, China

- Doubled the platform's supported environmental data categories (from 2 to 4) by independently implementing end-to-end water and waste data integration, developing Rails backend ingestion pipelines, PostgreSQL schemas, and client-facing React/Vite/Tailwind dashboards.
- Engineered asynchronous data pipelines with RabbitMQ, Redis, and Sidekiq to process long-running ingestion jobs in the background, decoupling external API calls from user-facing requests.
- Implemented a key client-requested feature by redesigning project-device mapping workflows, refactoring legacy forms to streamline the onboarding of environmental monitoring devices.

IT Consultant

January 2024 – July 2025

Boston University Engineering IT

Boston, MA

- Automated software deployment for 100+ devices using Microsoft Deployment Toolkit and created custom USB deployment solution for Windows 11, reducing deployment time by 40%.
- Managed 200+ user accounts and permissions via NAS, conducting access audits and boosting system uptime by 15%.
- Enhanced endpoint security with CrowdStrike for 50+ devices and resolved 20+ support tickets/week via ServiceNow, ensuring 100% incident resolution rate and alignment with enterprise platform workflows.

PROJECTS

Food Waste Platform (BU Spark!) | Django, JS, Auth0

September 2024 – December 2024

- Developed food waste reduction platform connecting students with leftover event food, implementing dual authentication (Django + Auth0 OAuth), QR code email delivery system, and many-to-many reservation management with real-time capacity tracking.
- Integrated Google Maps JavaScript API for interactive event discovery with user geolocation and distance calculations, implementing multi-criteria filtering across 18 food categories and 8 allergen types using Django class-based views with form validation.
- Deployed production Django application with WhiteNoise static file serving and automated Gmail SMTP notifications featuring inline QR code attachments, managing SQLite database with 100+ campus events while implementing comprehensive security features including CSRF protection and input validation.

TECHNICAL SKILLS

Languages: SQL, Python, JavaScript, TypeScript, Ruby, Java, HTML/CSS

Frameworks & Databases: PostgreSQL, Django, Ruby on Rails, Next.js, React, FastAPI, Spring Boot, Drizzle ORM

Infrastructure & Platforms: ServiceNow, Redis, RabbitMQ, Sidekiq, Docker, Git, Cloudflare, Microsoft Deployment Toolkit
