EDUCATION

Boston University

Boston, MA

Bachelor of Arts in Computer Science

Graduated: Spring 2026

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Distributed Systems, Databases.

EXPERIENCE

Technical Director / Software Engineer

December 2025 – Present

Ezespports

New York, NY

- Migrated an esports league platform from Google Sites to Next.js with a Supabase backend, replacing manual content updates with live scoring and automated season management.
- Designed a PostgreSQL schema on Supabase using Drizzle ORM, supporting 500+ matches across 20+ teams, and built RESTful endpoints for player statistics, standings, and historical data.
- Cut page load time by 75% (from 3.2s to 0.8s) by implementing edge caching on Cloudflare, route-based code splitting, and asset optimization for the Next.js frontend.

Software Engineering Intern

February 2026 – June 2026

RESET Standard

Shanghai, China

- Doubled the platform's supported environmental data categories (from 2 to 4) by independently implementing end-to-end water and waste data integration, developing Rails backend ingestion pipelines, PostgreSQL schemas, and client-facing React/Vite/Tailwind dashboards.
- Engineered asynchronous data pipelines with RabbitMQ, Redis, and Sidekiq to process long-running ingestion jobs in the background, decoupling external API calls from user-facing requests.
- Implemented a key client-requested feature by redesigning project-device mapping workflows, refactoring legacy forms to streamline the onboarding of environmental monitoring devices.

IT Consultant

January 2024 – July 2025

Boston University Engineering IT

Boston, MA

- Automated software deployment for 100+ devices using Microsoft Deployment Toolkit and created custom USB deployment solution for Windows 11, reducing deployment time by 40%
- Managed 200+ user accounts and permissions via NAS, conducting access audits and boosting system uptime by 15%
- Enhanced endpoint security with CrowdStrike for 50+ devices, resolving 20+ tickets/week with 100% incident resolution rate

PROJECTS

Hermes Letters | *Next.js, TypeScript, Supabase, Drizzle ORM, PostgreSQL*

June 2026

- Built a private long-form messaging platform for a group of 20+ friends during a study abroad semester, delivering 30+ letters.
- Ensured consistent letter claims via atomic SQL updates and secured sessions in XSS-resistant httpOnly cookies.
- Derived user connections at query time from kept-letter records using indexed lookups, avoiding a separate relationship table and associated database sync issues.
- Hardened media storage by validating uploads via server-side magic-byte signatures, storing files in a private Supabase bucket, and restricting delivery to 1-hour signed URLs.

Persephone | *Python, Cython, Rust, FastAPI, React/TypeScript, Kalshi, Low-Latency*

May 2026

- Built and launched a production Kalshi prediction-market trading system that generated ~\$8K net PnL over its first 4 days of live trading and traded ~\$200K in volume across model-driven quoting, exchange execution, risk controls, and operator tooling.
- Cut live hot-path latency by rewriting 9 performance-critical Python kernels into native Cython extensions for orderbook processing, OBI evaluation, RTI/event aggregation, threshold storage, and theo prediction.
- Built fail-closed market-data infrastructure that blocks stale, crossed, overflowed, or low-venue feeds before they reach the quoting path, using trusted-spot checks and venue-health state machines.
- Built a write-ahead order safety layer that records order intent before exchange dispatch, reducing duplicate-send and crash-replay risk with deterministic client IDs, final risk gates, and durable execution records.

TECHNICAL SKILLS

Languages: C++17, C/C++, Cython, Go, HTML/CSS, Java, JavaScript, Python, Ruby, Rust, SQL, Solidity

Frameworks & Libraries: Boost Libraries, CuPy, DBSCAN, Django, Drizzle ORM, Express.js, FAISS, FastAPI, Folium, Next.js, Node.js, OpenAI Whisper

Databases & Infrastructure: AsyncStorage, Auth0, CME MDP 3.0, Circom, Cloudflare, Cloudflare Pages, Cloudflare Tunnels, Docker, Docker Compose, Flyway migrations, GeoPandas, Git

Platforms & Systems: AWS, CrowdStrike, Ethereum, Heroku, Kalshi, MetaMask, Microsoft Deployment Toolkit, Modal, NAS, ServiceNow, Thirdweb SDK
