EDUCATION

Boston University

Boston, MA

Bachelor of Arts in Computer Science

Graduated: Spring 2026

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Distributed Systems, Databases, Machine Learning, Data Science.

EXPERIENCE

Software Engineering Intern

February 2026 – June 2026

RESET Standard

Shanghai, China

- Doubled the platform's supported environmental data categories (from 2 to 4) by independently implementing end-to-end water and waste data integration, developing Rails backend ingestion pipelines, PostgreSQL schemas, and client-facing React/Vite/Tailwind dashboards.
- Engineered asynchronous data pipelines with RabbitMQ, Redis, and Sidekiq to process long-running ingestion jobs in the background, decoupling external API calls from user-facing requests.
- Redesigned project-device mapping workflows in response to client requests, refactoring legacy forms to streamline onboarding of environmental monitoring devices.

Lead Product Engineer

December 2025 – Present

EZ Esports

New York, NY

- Designed a PostgreSQL schema on Supabase using Drizzle ORM, supporting 500+ matches across 20+ teams, and built RESTful endpoints for player statistics, standings, and historical data.
- Migrated an esports league platform from Google Sites to Next.js with a Supabase backend, replacing manual content updates with live scoring and automated season management.
- Cut page load time by 75% (from 3.2s to 0.8s) by implementing edge caching on Cloudflare, route-based code splitting, and asset optimization for the Next.js frontend.

PROJECTS

Persephone | *Python, Cython/C++17, Rust, Modal, FAISS*

May 2026

- Eliminated duplicate-send and crash-replay risk with a durable-before-wire order layer: intent journaled before dispatch, deterministic client IDs for idempotent retries, and persisted ack state for reconciliation.
- Built and operated a live Kalshi BTC prediction-market trading system end to end (market-data ingestion, theo serving, strategy evaluation, execution, and risk), generating \$8K net PnL on \$200K traded volume in its first 4 days.
- Replaced KDE inference with a GBM theo layer, cutting model query latency from $\sim 1.5\text{ms}$ to $\sim 20\mu\text{s}$ per query ($\sim 75\times$) behind an unchanged live serving interface.
- Designed a lock-free SPSC event ring in Cython/C++17 with cache-line-aligned atomic cursors and packed uint64 records, benchmarked at 584ns per enqueue and 703ns per event drained.

Whisperrr | *Java Spring Boot, Python FastAPI, React, PostgreSQL / Tailwind CSS*

September 2025

- Designed three-tier stateless architecture with HTTP connection pooling to reduce request latency by 70%, improving reliability for files over 25MB from 60% to 100% success rate
- Built full-stack transcription platform processing audio at 32x realtime speed, supporting 99+ languages across multiple audio formats with real-time results
- Containerized microservices with Docker Compose health checks and implemented segment-level timestamp generation for subtitle creation

Hermes Letters | *Next.js, TypeScript, Supabase, Drizzle ORM, PostgreSQL*

June 2026

- Ensured consistent letter claims via atomic SQL updates and secured sessions in XSS-resistant httpOnly cookies.
- Derived user connections at query time from kept-letter records using indexed lookups, avoiding a separate relationship table and associated database sync issues.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++17, Cython

Frameworks & Libraries: Spring Boot, React, FastAPI, Next.js, Vite, Node.js, Django, Tailwind CSS

Databases & Infrastructure: PostgreSQL, Redis, RabbitMQ, Supabase, Docker, Nginx, Cloudflare
