Junior AI

Talent Acquisition Team

New York, NY

Re: Application for Full Stack Engineer

Dear Annie Ntouva and the Junior AI Selection Committee,

Your note about the Full Stack Engineer role immediately caught my eye. I love building products from the ground up, so your focus on shipping LLM-powered software for private equity and consulting firms hits close to home. I work heavily with Next.js, TypeScript, and PostgreSQL. Because I enjoy owning features end-to-end, I would love to bring my background in data pipelines and performance optimization to your tight-knit team in NYC.

I look at software engineering as a balance between user experience and deep engineering stability. While working with Ezesports, I migrated our platform over to Next.js and a Supabase backend. By configuring edge caching and smart code splitting, I cut page load times by 75 percent. At RESET Standard, I handled background processing jobs by scaling out data pipelines with RabbitMQ and Redis. I know what it takes to move fast, ship clean code, and build infrastructure that businesses can actually trust.

A few independent projects show how I approach data and optimization:

- **LLMs and Media Pipelines:** I built *Whisperrrr*, an audio transcription platform that processes files four times faster than the stock OpenAI Whisper API by leveraging connection pooling and isolated Docker containers.
- **High-Throughput Backends:** I engineered *Persephone*, a trading system that managed live order books. I pushed critical bottlenecks into native Cython extensions to drive latency down to the microsecond level.
- **Product Ownership:** I design responsive interfaces using React, Next.js, and Tailwind CSS. My goal is always to make complex data tools feel smooth and completely intuitive for the person using them.

Building real AI products with a lean, highly capable team is exactly the environment where I do my best work. I am based right here in New York and would love to stop by your office to chat about how my full-stack background can help you scale. Thanks for reaching out and for your time.

Sincerely,

Simon Chen
